Premium Filters

Features and Benefits

The Numatics Delta Series™ offers premium filtration for applications which require high flows. The standard aluminum end caps on every element, premium manual drain, seals made of Fluorocarbon (FKM), and available 3 micron internal pleated prefilter sets the Delta Series™ apart from our competition. The Delta series premium filters are CRN registered (CRN# 0H12256.5C - Port sizes 1/4 to 2).

Delta Series[™] filters are ideal for use in many applications including industrial, process, medical, and are perfectly suited for compressor applications.

General Purpose Filtration

- Civil engineering
- Rock quarrying
- · Shot blasting
- Prefiltration for oil removal on dryers
- Industrial

Oil-free Compressed Air Application

- Spray painting
- Air conveying
- Air motors
- Process control
- Blow moldings
- Pre-filter for vacuum pumps

Critical Applications

- Breathing air
- Process air
- Food industry
- Breweries
- Hospital service
- Dryer
- Medical applications
- Film processing

The Numatics Delta Series[™] coalescing filters use a borosilicate glass fiber to remove contaminant from air lines. Air flows from the inside to the outside of the element through a converging/diverging pore structure, trapping contaminant particles in the media (not just on the surface) and forcing liquids to form

into larger drops and drain to the bottom of the bowl. Numatics filters are used to remove hydrocarbon, oil, liquid water, rust, and more. The coalescing filters are made up of eight main features:

1. Inner core

Prevents element from collapsing in backflow conditions

2. Optional internal pleated prefilter

3.0 micron media protects the fine borosilicate fibers from large particles, extending the life of the coalescing media

3. Inner media wrap

Allows crossflow of gas, which initiates the coalescing process

4. Media

Three coalescing media choices for best performance. Proprietary glass fiber blend combines low differential pressures and high efficiencies with maximum holding capacity (3 micron particulate and adsorbing grade also available)

5. Outer media wrap

Allows crossflow of gas and improves performance

6. Metal retainers

Supports the media both inside and outside during pressure spikes or high differential pressures

7. Drain layer

Large pore fibers allow the large coalesced liquids to drain to the bottom of the bowl

8. End caps

Aluminum end caps provide sturdiness and durability. All elements are clearly engraved with their model number.

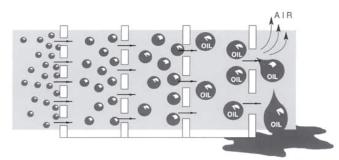

Premium Filters

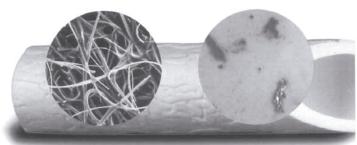

The science of coalescing filtration

Air flows from the inside to the outside of the element through progressively larger openings in the media. As contamination moves through the element, solid particles are trapped and liquids are formed into large droplets. As the air exits the element, surface tension holds the liquids and allows them to drain to the bottom.

The Numatics 0.01 micron borosilicate glass fiber element, when magnified 228x (left), shows deep, tortuous paths and large air pockets which provide high performance contaminate removal and longer life.

Contamination removal from a typical compressed air line with 0.01 micron Numatics media is shown magnified 40x (right). The contamination contains hydrocarbon (black), oil (opaque drops), and metal fragments (shiny spots).

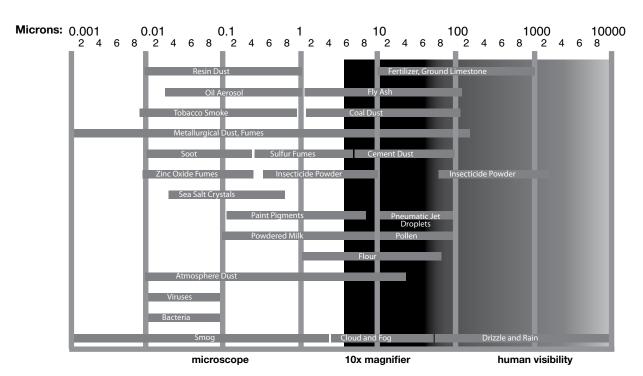

Scanning electron micrograph (at 228x)

Dirty filter magnification (at 40x)

With Numatics elements like the one on the left installed in your system, the contamination on the right won't get to where it can cause damage. Your system lasts longer and costs less.

What you get is not always what you see

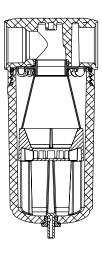

Water Separator

Delta 901 **SERIES**

F901X-12 pictured

Water Separators - F901X Series

Application:

The water separator is an ideal solution where water contamination is present. Water can damage pneumatic components, degrade your final product, and cause valves and cylinders to stick.

The water separator utilizes an internal spinner to remove large quantities of contamination by centrifugal action. Water, debris, and rust are spun outward to the inside diameter of the bowl. Gravity then sends the contaminant to the bottom of the bowl for discharge.

Recommended Uses:

- Bulk liquid and solid contamination removal
- Downstream from compressor/aftercoolers
- Protection for coalescing elements from large liquid loading
- Refrigerated compressed air dryers

Materials of Construction:

Head 1/4 - 3: A380.0 Cast Aluminum - Anodized Bowl 1/4 - 3: A380.0 Cast Aluminum - Anodized

Internal Separator Components: A380.0 Cast Aluminum - Anodized

Seals: Fluorocarbon (FKM) Standard Manual Drain: Brass

Note: Option combinations default to lower pressure and temperature rating.

Particulate Grade Filter

ISO CLASS 3 |

Particulate Filter - 3.0 Micron - F901G Series

Application:

The particulate filter is designed for heavy dirt loading. Large particles such as rust, desiccant dust, and debris will often reduce the life of pneumatic components. Contaminant is generated from desiccant type air dryers, older carbon steel pipes, and from the intake of a compressor.

The particulate 3.0 micron filter element features a pleated design - consisting of cellulose composite media which provides a large amount of surface area and extends the life of the element. When air flows - from the outside of the element to the inside, the particles are trapped in the space between the filter bowl and the element.

Recommended Uses:

- Solid bulk contamination removal
- Afterfilter to a desiccant dryer
- Protection for coalescers in heavy aerosol applications
- 3 micron particle removal in 'dry' systems

Specifications: { Per ISO 12500 at 33.2 ppm Inlet (40 mg/m³) }

• Solid Particle Efficiency: 97.5%

• Maximum Solid Particle Size: 3 µm

Maximum Solid Concentration: 1.0 mg/m3 / (0.8375 ppm)

• Flow Path: Outside To Inside Of Element

Materials of Construction:

Filter Particulate:

Head 1/4 - 3: A380.0 Cast Aluminum Bowl 1/4 - 1: A380.0 Cast Aluminum Bowl 1-1/4 - 3: A356.0-T6 Cast Aluminum

Seals: Fluorocarbon (FKM) Standard Manual Drain: Brass

Note: Heads and Bowls - Anodized

Particulate Element:

End Caps: 6061-T6511 Anodized Aluminum

Element: Phenolic Cellulose Pleat

End Cap Bonding Material: Epoxy Resin Support Cores: Galvanized Carbon Steel

Coarse Grade Coalescing Filter

ISO CLASS 3 4

Coalescing Filter - 1.0 Micron (Coarse Grade) - F901H Series

ANSI SYMBOL

Application:

The coarse coalescing filter is utilized when low pressure drop or crude separation is required. The coarse filter element is preferred in low pressure and vacuum application so that the efficiency of the compressor or pump is not sacrificed. Also, the coalescing element will take out crude amounts of large liquid oil and water particles, specifically downstream of a compressor to protect a dryer. The coalescing 1.0 micron coarse grade filter element features a unique vacuum-formed process. It utilizes micro-glass fibers in raw form to create a seamless, depth-loading media. Combined with a rigid fiber-binding epoxy, the filter element has great strength and high efficiency.

Recommended Uses:

- Mainline plant filtration
- Prefilter to refrigerated air dryer
- 1 micron particle removal in 'dry' systems
- Heavy oil concentration removal

Specifications: { Per ISO 12500 at 33.2 ppm Inlet (40 mg/m³) }

• Coalescing Efficiency = 95.0%

• Maximum Solid Particle Size: 1.0 µm

Maximum Solid Concentration: 2.8 mg/m3 / (2.3 ppm)

Maximum Oil Concentration: 2.0 mg/m3 / (1.66 ppm)

• Flow Path: Inside to Outside Of Element

Materials of Construction:

Filter Coalescing:

Fine Grade Coalescing Filter

$\Pi \sqcap \Pi$ ISO CLASS

Coalescing Filter - 0.01 Micron (Fine Grade) - F901D Series

Application:

The fine coalescing filter is utilized when clean air is required and longer component life is desired. It is recommended in most point-of-use applications for industrial use. Also, the fine coalescer removes small particles of oil, water, and rust that can create problems in painting and coating processes. The coalescing 0.01 fine grade filter element features a unique vacuum-formed process. It utilizes micro-glass fibers in raw form to create a seamless, depth-loading media. Combined with a rigid fiber-binding epoxy, the filter element has great strength and high efficiency.

Recommended Uses:

- Paint spraying
- Pneumatic tools and instrumentation
- Robotics
- 0.01 micron particle removal in 'dry' systems
- Low oil concentration removal

Specifications: { Per ISO 12500 at 33.2 ppm Inlet (40 mg/m3) }

- Coalescing Efficiency = 99.975%
- Maximum Solid Particle Size: 0.01 µm
- Maximum Solid Concentration: 0.1 mg/m3 / (0.08 ppm)
- Maximum Oil Concentration: 0.01mg/m3 / (0.008 ppm)
- Flow Path: Inside to Outside Of Element

Materials of Construction:

Filter Coalescing:

Head 1/4 - 3: A380.0 Cast Aluminum Bowl 1/4 - 1: A380.0 Cast Aluminum

Bowl 1-1/4 - 3: A356.0-T6 Cast Aluminum Seals: Fluorocarbon (FKM)

Ultra Fine Grade Coalescing Filter

ISO CLASS 1 1 1

ina Cuada). FOOdE Savias

Coalescing Filter - 0.01 Micron (Ultra Fine Grade) - F901E Series

ANSI SYMBOL

Application:

The ultra fine coalescing filter is ideal where critically clean air is needed and pressure drop is not a concern. It is a polishing filter to clean up any remains of particles or oil that are left over from the compressor room filtration. It is mainly a point-of-use filter that is targeted specifically for critical processes. The coalescing 0.01 ultra fine filter element features a unique vacuum-formed process. It utilizes micro-glass fibers in raw form to create a seamless, depth-loading media. Combined with a rigid fiber-binding epoxy, the filter element has great strength and high efficiency.

Recommended Uses:

- Blow molding plastics
- Semiconductor packaging
- Critical instrumentation
- 0.01 micron particle removal in 'dry' systems
- Low oil concentration removal

Specifications: { Per ISO 12500 at 33.2 ppm Inlet (40 mg/m3) }

• Coalescing Efficiency = 99.99%

• Maximum Solid Particle Size: 0.01 µm

Maximum Solid Concentration: 0.008 mg/m3 / (0.006 ppm)
Maximum Oil Concentration: 0.004 mg/m3 / (0.003 ppm)

• Flow Path: Inside to Outside Of Element

Materials of Construction:

Filter Coalescing:

Vapor Adsorbing Grade Filter

Delta 901 SERIES

ISO CLASS 4 4

Vapor Adsorbing Filter - F901F Series

Application:

The adsorbing filter removes oil and larger hydrocarbon vapor from the compressed air stream. Since it only removes vapor, a coalescing element, specifically the F901D, should be used immediately upstream of the adsorbing filter. Since optimum adsorption occurs at lower temperatures, it is recommended to apply the filter as close to the point-of-use as possible. The fine grade features fine activated charcoal impregnated on polyester media. The activated carbon particles have a high affinity to vapor and are extremely efficient due to the tremendous amount of surface area present. The adsorbing element should be changed every 3 to 6 months depending on the application.

Recommended Uses:

- Breathing air applications
- Food and drug industries having direct product contact with exhaust air
- Odor-free air applications
- Heavier hydrocarbon vapor removal

Specifications:

- Efficiency: 90.0% at Maximum Flow
- Maximum Oil Vapor Concentration: 0.003 ppm based on 0.015 ppm Inlet
- Coalescing Prefilter Recommended
- Flow Path: Outside to Inside Of Element

Materials of Construction:

Filter Adsorbing:

Head 1/4 - 3: A380.0 Cast Aluminum Bowl 1/4 - 1: A380.0 Cast Aluminum Bowl 1-1/4 - 3: A356.0-T6 Cast Aluminum

Seals: Fluorocarbon (FKM) Standard Manual Drain: Brass

Note: Heads and Bowls - Anodized

Adsorbing Element:

End Caps: 6061-T6511 Anodized Aluminum

^{*} Weight includes W option drain and bushing.

Replacement Parts and Kits

Replacement Elements - 901 Series

Replacement Elements Kit						
includes filter element and seal						
Kit #	Description					
1/4, 3/8, & 1/2 Un	its					
EKF9004G-B	3.0 micron micron particulate					
EKF9004H-B	1.0 micron coarse coalescing					
EKF9004HD-B	1.0 micron coarse coalescing w/ pleated prefilter					
EKF9004D-B	0.01 micron fine coalescing					
EKF9004DD-B	0.01 micron fine coalescing w/ pleated prefilter					
EKF9004E-B	0.01 micron ultra fine coalescing					
EKF9004ED-B	0.01 micron ultra fine coalescing w/ pleated prefilter					
EKF9004F-B	adsorbing					
Element Only - Weight 0.35 lbs (.16 kg) for all sizes						

3/4 & 1 Units					
EKF9008G-B	3.0 micron micron particulate				
EKF9008H-B	1.0 micron coarse coalescing				
EKF9008HD-B	1.0 micron coarse coalescing w/ pleated prefilter				
EKF9008D-B	0.01 micron fine coalescing				
EKF9008DD-B	0.01 micron fine coalescing w/ pleated prefilter				
EKF9008E-B	0.01 micron ultra fine coalescing				
EKF9008ED-B	0.01 micron ultra fine coalescing w/ pleated prefilter				
EKF9008F-B	adsorbing				
Element Only - Weight 1.0 lbs (.45 kg) for all sizes					

1 1/4 & 1 1/2 Units	3				
EKF9012G-B	3.0 micron particulate				
EKF9012H-B	1.0 micron coarse coalescing				
EKF9012HD-B	1.0 micron coarse coalescing w/ pleated prefilter				
EKF9012D-B	0.01 micron fine coalescing				
EKF9012DD-B	0.01 micron fine coalescing w/ pleated prefilter				
EKF9012E-B	0.01 micron ultra fine coalescing				
EKF9012ED-B	0.01 micron ultra fine coalescing w/ pleated prefilter				
EKF9012F-B	adsorbing				
Element Only - Weight 1.85 lbs (.84 kg) for all sizes					

2 Units					
EKF9016G-B	3.0 micron micron particulate				
EKF9016H-B	1.0 micron coarse coalescing				
EKF9016HD-B	1.0 micron coarse coalescing w/ pleated prefilter				
EKF9016D-B	0.01 micron fine coalescing				
EKF9016DD-B	0.01 micron fine coalescing w/ pleated prefilter				
EKF9016E-B	0.01 micron ultra fine coalescing				
EKF9016ED-B	0.01 micron ultra fine coalescing w/ pleated prefilter				
EKF9016F-B	adsorbing				
Element Only - Weight 3.6 lbs (1.64 kg) for all sizes					

2 1/2 & 3 Units						
EKF9024G-B	3.0 micron micron particulate					
EKF9024H-B	1.0 micron coarse coalescing					
EKF9024HD-B	1.0 micron coarse coalescing w/ pleated prefilter					
EKF9024D-B	0.01 micron fine coalescing					
EKF9024DD-B	0.01 micron fine coalescing w/ pleated prefilter					
EKF9024E-B	0.01 micron ultra fine coalescing					
EKF9024ED-B	0.01 micron ultra fine coalescing w/ pleated prefilter					
EKF9024F-B	adsorbing					
Element Only -	Element Only - Weight 6.35 lbs (2.88 kg) for all sizes					

Bowl Replacement includes bowl only	
Bowl #	Description
BKF9001-B	for 1/4, 3/8, & 1/2 units
BKF9002-B	for 3/4 & 1 units
BKF9004-B	for 1-1/4 & 1-1/2 units
BKF9005-B	for 2 unit
BKF9006-B	for 2-1/2 & 3 units

Separator Bowl includes bowl only	
Bowl #	Description
BKF9001-B	for 1/4 & 1/2 units
BKF9004S-B	for 3/4, 1, 1-1/2
BKF9005S-B	for 2 units
BKF9006S-B	for 3 units

Filter & Separator Head Replacement Seals includes o-ring only	
FPHS9001-04	for 1/4, 3/8, & 1/2 units
FPHS9001-12	for 3/4, 1, 1-1/4, & 1-1/2 units
FPHS9001-16	for 2 units
FPHS9001-20	for 2-1/2 & 3 units
